Liquid Waste and Industrial Services

JR Richards & Sons capabilities cover an extensive range of liquid waste collection, industrial cleaning and high power vacuum loading services. With a modern and state of the art fleet, we can cater to your industrial service cleaning and waste needs no matter the job size or location.

Servicing Your Needs

JR Richards & Sons provide safe, effective and efficient industrial services to cover a wide range of customer needs including:

- Non-Destructive Digging/Potholing
- Underground Asset Locating
- Tank Cleaning
- Industrial Vacuum Loading
- Culvert Clearing
- High Pressure Water Blasting
- Industrial Cleaning
- CCTV Drain & Sewer Line Inspections
- Drain & Sewer Line Clearing
- Gross Pollutant Trap Cleaning
- Environmental Spill Management

Safety First

JR Richards operate a licensed fleet of compliant liquid vacuum tankers and industrial service units that can provide around the clock servicing. We provide safe and economical collection, treatment and disposal of a variety of waste types including:

- Oily water and sludge
- Effluent and septic waste
- Drill mud
- Contaminated storm and ground waters
- Construction & demolition residue and dust
- Contaminated soil

CCTV Inspection and Asset Reporting

JR Richards offer a full range of CCTV inspection and reporting services for pipes, pits and other underground assets.

Utilising state of the art remote controlled camera equipment, our operators are able to provide detailed mapping and asset condition reports for pipes ranging in size from 100mm up to 1000mm. Using a purpose-designed software package, the operators are able to provide detailed reports highlighting the locations of breakages, blockages, or other damage (for example tree roots) with the report data supported by high quality colour video footage.

Wet and Dry Vacuum Capabilities

With a CAP BORA unit utilising the latest technology, JR Richards is able to vacuum dry material up to the size and weight of half a standard house brick – making it ideal for clean ups at mine sites, construction sites, dry material storage bunkers and material stockpiles.

The CAP BORA unit also allows dry product to be tipped directly into bin storage systems or blown into containment vessels.

One Stop Shop for Liquid and Industrial Services

JR Richards & Sons offer a full range of liquid waste collection and Industrial Services. Our specialist fleet and trained staff can cover most metropolitan & regional NSW areas and cater to all customer types, including;

- Councils
- Mine sites
