

Company Profile

Relocatables Australia is a local privately owned company that manufactures and supplies a range of relocatable products for the mining, civil, marine and construction industries, including workshops, site support facilities and wastewater treatment plants.

We are committed to a strong belief in the introduction of innovations in both the design and the supply of infrastructure required for maintenance and operational activities. Our aim is to work in partnership with customers to ensure they gain maximum value from their most valuable asset - the workforce.

These units are designed for rapid deployment and installation wherever you require an alternative to permanent traditional infrastructure. All of our products are designed and manufactured in Perth to appropriate Australian Standards and to the highest standard of quality, intended to perform to your company's vast challenges and meet the stringent regulations of the industry.

Workshops range from a 12m x 12m workshop using 2 containers to multiple bays able to accommodate the largest of mining equipment. As we build to meet or exceed our client's requirements we are able to include such facilities as crib rooms, toilets, offices, lube store and dispensing systems, storerooms and hydraulic hose assembly units.

Our self contained site support facilities that incorporate fresh water flush toilets, air conditioned crib rooms and storage facilities are available in 2 sizes 6m and 12m and can be operational within 20 minutes of site delivery. These can be coupled to our site store that provides a hydro carbon store, mini workshop and small office and has a shade structure that can be installed without costly access equipment.

What sets us apart from other providers of containerized systems and solution suppliers is our ability to undertake the complete job in house from design, manufacture, earthworks, concrete installation, services installation and final commissioning.

No information contained in this proposal can be used for any other purpose specified without the written permission of Relocatables Australia

Recent projects include:

- 80 metre wide five bay workshop for BIS Logistics (All work except earthworks and concrete undertaken by Relocatables)

No information contained in this proposal can be used for any other purpose specified without the written permission of Relocatables Australia
