'delivering great service to our customers'

General guidelines

- The installation charge is higher for underground supply poles where only an authorised person (usually a registered electrician) and a safety observer is allowed to work with the Energex green pillar box

Timing guidelines

- Please allow 5 to 10 business days from installation of the pole to connection of power by Energex
- Every endeavour will be made for installation on the target date. However, due to other circumstances the date cannot always be guaranteed. If a delay occurs, the pole is usually installed within 4 days of the target date.
