

MINING CAMPS AUSTRALIA

DESIGN, CONSTRUCT, INSTALL, MAINTAIN & MANAGE

CAPABILITY STATEMENT

OVERVIEW

Mining Camps Australia (**MCA**) design, engineer, manufacture and install camps to the highest Australian standards to endure the harshest of environments. **MCA** camps can be configured to suit personnel requirements and are available for short or long term hire for periods to suit your needs. **MCA** camps can be delivered to any location across Australia or overseas. The 'Plug & Stay' system ensures full camp functionality within 24 hours and are installed and maintained by our team of qualified and safety focused professionals.

MCA camps are compact and tough, making them ideal for limited access locations and suitable for all climates and environments and are also designed to be relocated on a regular basis if required. They are designed to provide the highest level of comfort yet are robust enough to handle the harsh conditions synonymous with remote mining, exploration and construction environments. This durability ensures minimal site issues during the project in order to support employee satisfaction & stability. This in turn ensures the most productive outcomes and the best return on your investment.
