## ABOUT US

■ Founded in 1994, Safe Dig Services has expanded rapidly over the years, starting with two humble trucks, to our current fleet of over 30 vehicles. With our impeccable track record and extensive knowledge serving the Australian community, Safe Dig Services have over 20 years' experience in the Hydro Excavation, Construction and Telecommunications industry. We are proud to have based our success on strong management and relationships with many of Queensland's top-tier companies and councils. Safe Dig Services prioritises safety above all. Our staff are well trained, qualified, and licensed in handling jobs big and small.

## VISION STATEMENT

*Through our unfailing commitment to achieving the best results for our clients, we will be the supplier of choice of innovative, accurate, efficient, and safety focused services, both big and small, in the Civil Construction industry*

- 4000L vacuum trucks
- 5000L vacuum trucks
- 6000L vacuum trucks
- 8000L vacuum trucks
- 16000L vacuum trucks

## What are the benefits of vacuum excavation?

■ Vacuum Excavation or Non Destructive Digging (NDD) is the preferred method of excavation for many in the Civil Construction Industry.

Vacuum trucks use high-pressure water jets to break up solid ground, whether it's sand or clay, rocks or soil and simultaneously vacuums the debris away, into a holding tank, for disposal after a job is completed. This is a non-invasive, cost effective and accurate way to visually locate underground utilities prior to excavation and reduces the risk associated with damaging these assets.

Safe Dig offers a wide range of State of the art NDD units for vacuum excavation. Depending on the application, our units range from: 3,000L to 16,000L units.

*With many underground utilities located beneath the surface, it is imperative that care is taken when excavating. Safe Dig utilises the latest non-destructive vacuum excavation technologies, ensuring all project sites are left with minimal risk. Vacuum excavation is a safe way to expose underground assets and allows cost effective and accurate non-destructive excavation around these utilities coupled with minimal surface disruption thereby reducing environmental impact*

*This method of non-destructive digging is clean and non-invasive simultaneously sucking debris into the vacuum truck and exposing utilities such as sewer, gas, storm water, water, telecommunications and underground power. Vacuum excavation also provides a solution to digging in confined spaces and built up areas reducing risk to personnel and minimizing OH&S and environmental risks that are commonly associated with deep excavation.*

*With the use of the latest vacuum excavation technologies, Safe Dig can reduce the use of unnecessary digging equipment and machinery movement, reducing manpower and saving each client time and money, meaning your project is on-time and cost-efficient.*

# UNDERGROUND SERVICE LOCATING

## Why use Safe Dig for your underground service locating?

■ When locating services, our main goal is to avoid damage from accidental excavation. With the latest in vacuum excavation technology, as well as 2D Ground Penetrating Radar, your services are guaranteed to be located easily and safely. Safe Dig Underground Service Location experts can help you locate; core infrastructure including water, gas, telecommunications, sewer or underground power by using the most up to date Ground Penetrating Radar (GPR) or Locating Wand. This can then be confirmed by Potholing using our vacuum trucks and then reinstated to leave the ground to its original state. The information is then tabulated and provided to clients as report.

Safe Dig also has capabilities to locate blockages using Push cameras and then clear them out using our drain cleaning or jetting vacuum trucks. Our state of the art machinery are able to clean drains ranging from 100 mm up to 2 m culverts.

*Safe Dig is a leading Australian underground service Locating company servicing throughout Brisbane, Gold Coast and Ipswich from our Brisbane office, Mackay, Gladstone and regions in North Qld from our Mackay office.*

*We are one of the few companies in Queensland that have fully accredited Telstra and Optus certified locators and Dial Before You Dig certified locators for optic fibres.*

*If a pipe made from PVC or concrete is difficult to locate, we can trace the pipe using a fibre glass tracer rod or a Sonde to carry our locating signal, to confirm the service location, depth and alignment.*

*With our expertise and the latest technology in 2D ground penetrating radar and backed by 30 years of experience across Queensland, your underground services are guaranteed to be located easily and safely.*

*Safe Dig meets all requirements, including appropriate insurances for all plant, equipment and services to ensure your peace of mind. We are well versed with majority of the underground services, so you can be confident you're getting the right advice before you dig, every time.*

# CIVIL SERVICES

■ Safe Dig services is focused on quality service, efficiently delivered. We can assist with:

- Excavators for traditional excavation
- Water Trucks for dust suppression and water delivery
- Vacuum Tankers for pump outs and carting
- Spray Trucks for vegetation clearing

We are EPA licensed and permitted to cart hazardous waste which includes asbestos slurry, oily water, sludge, sewer waste, grease trap waste and so on.

## OUR EQUIPMENT

- 5 Tonne excavator with attachments (ripper, jack hammer, mulching head, various buckets sizes, compaction wheel)
- Water trucks with cannon and rear suppressors (10,000L)
- Vacuum Tankers (16,000L)
- Spray Truck for Vegetation clearing

# DRAIN CLEANING

■ Safe Dig Services has enormous experience in cleaning storm water, sewer pipes, culverts and drains. Our Jetting and Vacuum Combo trucks can cater to drains ranging from 100 mm to large 2 m culverts. With specialised nozzles of varying sizes and fully trained and equipped staff, we are able to handle the toughest of them all.

Safe Dig also has push cameras at their disposal which is used to locate blockages and then clear them out using our state of the art Jetting vacuum trucks. This enables us to combine multiple services into one, saving costs onsite and increasing efficiency, allowing every drain to carry out its original purpose.

Large culvert cleaning projects involves a combination of equipments which includes the Jetting vacuum trucks, excavators and water trucks thereby minimising the need to get off site.

# OUR MAJOR PROJECTS

Working alongside a number of leading civil and construction companies, Safe Dig Services has delivered positive outcomes, for a range of projects with varying needs.

Our client list includes major Council Departments, Telecommunications, Building and Construction contractors, Transport industry which includes Rail and Mine.

## MAJOR PROJECTS:

- NBN Roll out throughout SEQ
- Mackay Ring Road Project
- Mackay Northern Access Project
- QR Loop Extension Project
- Council Contracts for Vacuum Excavation as part of Panel
- Culvert Cleaning and Jetting Contract as preferred supplier throughout North Qld
- Road widening and Extension contracts throughout SEQ
- GEN 2 Road Asset Management Contract
- Council contract for Catchpit cleaning in SEQ

# OUR AWARDS

**Award**

With our growth, compliance and performance comes recognition. Safe Dig gets reviewed and externally audited annually through our Rail and Transport clients and have been recognised as Fully compliant and Safety oriented business.

We are a Level 3 contractor for Aurizon and have clinched multiple contractor of the month awards.

We have also been shortlisted as a Finalist for the Australian Small Business Champion Awards 2020.

# TECHNOLOGICAL ADVANCEMENT

## PAPERLESS TECHNOLOGY

- Improved response rate to maintenance and monitoring competencies
- Turn Key solution as the system incorporates booking, scheduling, operation documentations and dockets
- Real time monitoring through vehicle asset tracking system
- Cloud based storage for future reference thereby eliminating process of filing and storage
- User friendly as operators are able to check in and check out and the hours are calculated towards their time sheets
- CRM focussed system keeping pipeline of clients for future correspondence

## // Client Testimonial

*Safe dig Vacuum Excavations have always provided BMD with excellent service and assistance in completing the projects they were contracted for. The team is punctual and reliable, providing experienced workers with new machinery which limits breakdowns and delays. The team have fully implemented safety systems, supplying Safe Work Method Statements, Safety and Environmental Plans, and accurately recorded safety statistics specific to each job they take on.*

*I can confidently recommend Safe Dig Vacuum Excavations as a reliable and reputable sub-contractor whom produce high quality work, follow direction and technical specification, and conduct themselves in a professional and safe manner at all times. //*

**David Stanworth**, CQ Project Area Manager, BMD Urban

## // Client Testimonial

*We have been doing business with Safe Dig Services for over 5 years, assisting us with Vacuum Excavations around Brisbane and parts of Mackay and they have been nothing but Professional and organised in their job. From booking a job, to getting to the site on time, to finishing the job in the defined time, Safe Dig has proven to tick all the boxes. The team are reliable and have all safety plans, Quality management systems, Work method statements in order and up to date. I highly recommend Safe Dig services to anyone that wants to get their job done with peace of mind. Like how they put it, "One Name says it all". //*

**John Delaney**, Plant Manager, Shamrock Civil Engineering

## // Client Testimonial

*We have been using Safedig for a number of years now, and find them very efficient and responsive. Professional and friendly service from first phone call to completion of job. I have no hesitation in recommending them for Service Locating services. //*
