

CCTV Services

CCTV surveillance for drains and pipes

JR Richards offers an accredited Closed Circuit Television (CCTV) pipe inspection and monitoring for underground assets in wastewater systems. Our service enables the collection of inspection data using “Licensed Software” to provide a full structural inspection report on all types of underground assets. The system tracks the linear length of the conduit to determine the precise location of defects for future rectification.

CCTV pipe inspection benefits

- Identifies blockages and defects to Wastewater Systems (sewer), stormwater drains, and conduits
- Determines the integrity and General Condition of pipework.
- Uses an accredited “Software Package” call WinCan V8 & V13 to accurately report to asset owners the condition of assets, including structural Integrity, precise location and remediation actions.
- Helps plan future asset maintenance scheduling
- Enables Asset Future Capital planning for growth.
- Designed to Survey conduits from 100mm to 1,000mm utilising specialised pipe centring tooling and lighting

The JR Richard's CCTV pipe inspection unit, utilises a self-propelled tractor CCTV camera unit, which also utilises a sonar locating system.

All our Trained Operators are Trained ticketed to the latest AS Standards for “Conduit Inspection Coding and Reporting”

Quality assurance

Our specialist fleet of vehicles is second to none, backed by a team of seasoned drivers with vast experience. Each vehicle operates under strict licensing standards, compliant with all state and environmental regulations.
