

Company Profile

Demolition Excavation Remediation/Rehabilitation Plant Hire

About us:

Established eleven years ago, CMS Plant Hire has quickly developed to become one of New South Wales' most **dynamic** and **adaptive** civil/structural and environmental contracting companies. We strive to provide the highest level of service possible to clients, whilst still ensuring quality controls are sustained to maintain the safety of employees and sustainability of the environment.

Our people hold a wealth of knowledge and experience in all types of alternate materials and project winning processes to ensure the future growth of CMS.

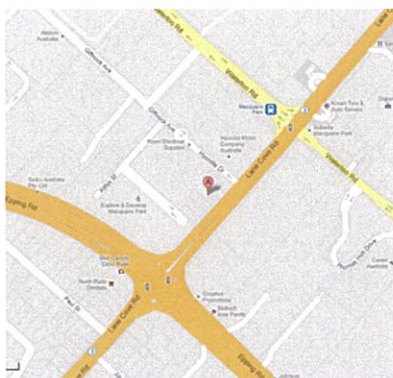

Past experience has been broadly in infrastructure works, including design on both commercial and residential subdivisions, road/bridge and pavement construction, golf courses and sea wall construction, sewer/drainage/water/electrical infrastructure works, commercial construction and rehabilitation/remediation to a large degree.

Our internal quality management system complies with ISO9001:2000. We also are proud in having our OHS&R system compliant to NSW Government guidelines to (4th Edition).

Our Services:

CMS Plant Hire's civil construction division enables us to provide our own machinery, equipment and operators. By utilizing our own personnel and equipment on a project we are able to **guarantee** our clients a consistent high level of **quality** and work.

CMS Plant Hire provides land remediation services. This includes for the treatment and removal of contaminated fill and groundwaters which allows us to advise your company on the **best** process of treatment or disposal and provide all associated environmental services.

Quality & Efficiency is our *Guarantee*

Our service provides peace of mind that correct and efficient procedures are applied whilst still providing a **cost effective** solution to allow your project/site manager or foreman to concentrate on their job costing, time constraints and the many other facets of your building

The evolution of CMS Plant Hire within the construction industry has enabled us to specialise in civil and structural packages and so providing a complete service to our clients.

Our Resources:

CMS Plant Hire have established a large database of approved subcontractors who have displayed **professionalism and quality of service** throughout our association. They are reliable and also share the same work ethics with regards to safety and industry standards.

Our large base of specialised machinery subcontractors, allows us to **excel** in unique projects that require more than conventional machinery.

Occupational Health & Safety

The safety of our workers and fellow site members is paramount. Our system complies with the NSW Government OHS&R management system guidelines to the 4th edition. All subcontractors engaged by CMS Plant Hire Pty Ltd are included in the scope of our OHS&R documents.

Additionally, all workers and subcontractors have completed the relevant industry inductions (Workcover NSW) and hold tickets demonstrating their qualifications.

Qualifications

- ✓ Workcover Safety Induction (Greencard)
- ✓ Supervisor OH&S Certificate
- ✓ Confined Space Training
- ✓ Plant Operators Workcover Approved
- ✓ First Aid
- ✓ Safety Training
- ✓ Traffic Control
- ✓ OH&S Management compliant to 4th Addition
- ✓ AIP Accredited
- ✓ Management System compliant to ISO-9001
- ✓ AS 1 Licensing

Our Areas of Expertise:

CMS Plant Hire's extensive experience demonstrates our capability of successfully constructing, operating and managing earthworks, civil projects and capturing market share.

We have **efficiently** completed many contracts via utilisation of screens, crushers and trommels. Total site establishment combining all of the above-mentioned processing equipment has at times been required.

We are also able to utilise crushing and screening machinery at our landscape yard for the production of various materials.

Excavation

Our Areas of Expertise:

- **CMS Plant Hire offers environmental services** specific to work pertaining to contaminated soils, sediments, sludges and liquids. Examples of such services are;
- **Remediation/Rehabilitation of site at 58 Lisbon Street, Fairfield (Invensys Ltd)**
 - Works included the remediation of approximately 12 000 cubic metres of hydrocarbon contaminated soil and the removal of floating oils and hydrocarbons impacting groundwater. A number of asbestos lined furnaces were removed and disposed of.
- **Remediation/Rehabilitation of Schofields Aerodrome (Department of Defence)**
 - A total of 16,000T of contaminated soils required remediation
 - Remediation was undertaken using innovative screening and tromelling techniques to remove bulk contamination from soils. This significantly reduced the volumes of material requiring landfill disposal, resulting in significant cost savings to the client.
- **Remediation/Rehabilitation of Westbus Bonnyrigg Depot (Westbus)**
 - Significant petroleum hydrocarbon contaminated soils and sediments were identified in artificial water channel at the site.
 - The application of specially formulated soil additives and bioremediation enhancers allowed 1200T of impacted soils to be remediated within 2 weeks. Considering the nature of the contamination and area constraints in place on the site, this project represented one of the most successful bioremediations undertaken in New South Wales.
- **Remediation/Rehabilitation of Randwick Army Barracks (SE Portion) (Dept of Defence)**
 - Remediation works comprised of the excavation and screening of 15,000T of asbestos and scrap metal impacted soils. Overburden and contaminated material was stored within covered locations on the site. The works were undertaken within 5m of existing residential areas, in an area characterised by strong winds. As a consequence, environmental protection of the works was paramount to our ability to effect completion. Remediation works were completed with no complaints recorded by adjoining residents.

Remediation

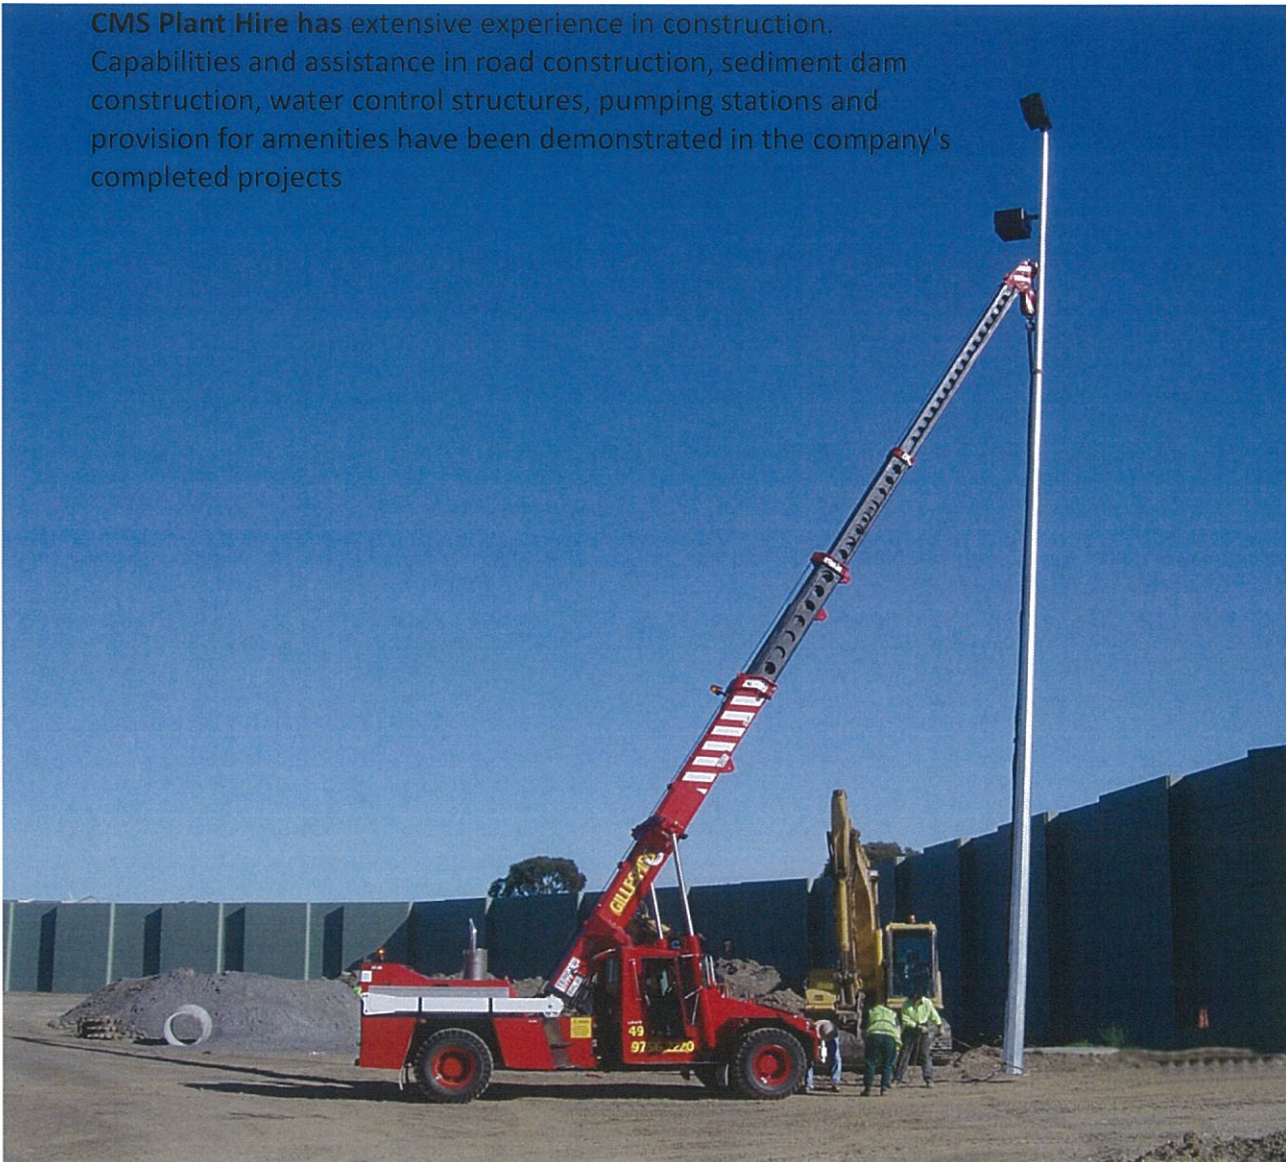

CMS
CMS Plant Hire

Our Areas of Expertise:

CMS Plant Hire has extensive experience in construction. Capabilities and assistance in road construction, sediment dam construction, water control structures, pumping stations and provision for amenities have been demonstrated in the company's completed projects

Construction

Our Plant & Equipment:

We have continued to build our range of plant and equipment to assist with high demand. Our plant is presented in the highest standards and is available for external hire when available. Our present range extends from articulated dump trucks, graders, dozers, water carts, compactors, excavators 3 – 50t, backhoes and skid steers. Having such a diverse range of plant to call upon internally provides us with flexibility and meets our workload demands.

Our Plant & Equipment:

CMS Plant Hire has invested in the latest GPS systems to ensure the finished products meet quality, time and budget constraints.

Overview of Experience:

CLIENT	SITE	SCOPE	SIZE/VALUE	DURATION
Rapid	Rockdale	Rebuild of Rockdale Bus Interchange	\$200,000	2012
Leightons	Kempsey Bypass	Kempsey Bypass hourly hire contract under direction from Leightons.	Ongoing	Dec 2010 - Ongoing
